

React Terms Every Dev Should Know

[Different but Important.]

@gulraizcodes

Keywords

These are some important keywords
in **REACT** like:

- Declarative.
- JSX.
- Components.
- State
- Props
- Virtual DOM

@gulraizcodes

Sentence

REACT is a **Declarative** Paradigm. Instead of telling what to do. We give it some **STATE**, some **component** that are built with **JSX** and they receive **PROPS** which create a **Virtual DOM**.

Read this sentence carefully.

@gulraizcodes

Breakdown

Declarative

This means we never interact with DOM, the UI is updated when we change the state.

State

Information about the component's current situation.

Components

A component is a JavaScript class or function that optionally accepts inputs like props.

JSX

JSX is an XML/HTML like syntax used by react that extends ECMAScript so that XML/HTML like text can co-exist with JavaScript/React code.

@gulraizcodes

Props

React allows us to **pass information** to a component using something called props.
[stands for properties]

Virtual DOM

A concept where an ideal or **virtual representation** of a UI is kept in **memory** or **synced** with the “Real” DOM by a library such as **ReactDOM**.
