We have earlier seen **SaaS**
similar to a **Taxi Service**

PaaS can be related to something like
RENTING a car

Here you will be taking responsibility
and control over few things

Self-drive

Gas fee

Choose route

Better Privacy

PaaS

Platform as a service (PaaS) is a complete development and deployment environment in the cloud

Developers

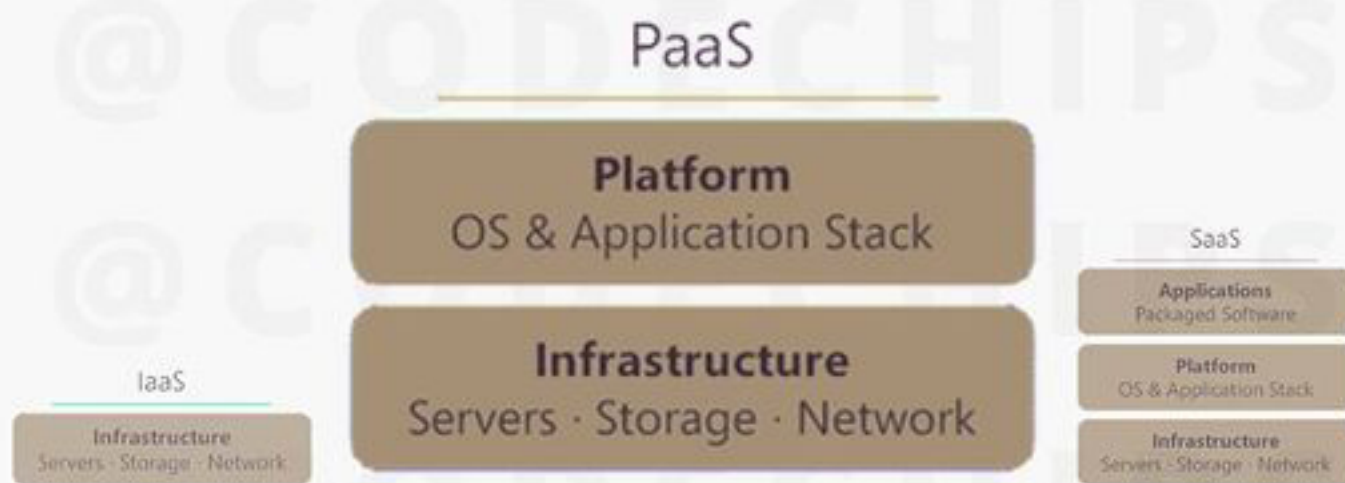

PaaS is designed to support the complete web application lifecycle: building, testing, deploying, managing and updating.

Includes infrastructure
— servers, storage and
networking

And also middleware,
development tools, business
intelligence (BI) services,
database management
systems and more

Why use PaaS ?

Avoid the expense and complexity of buying and managing

software licenses

container orchestrators

development tools

infrastructure

middleware

Example of PaaS

Heroku is a container-based
cloud Platform as a Service

*Developers use Heroku to deploy,
manage, and scale modern apps*
