

React Series - Day 1.

create-react-app: **The Complete** **Guide.**

[Everything you need to know.]

@gulraizcodes

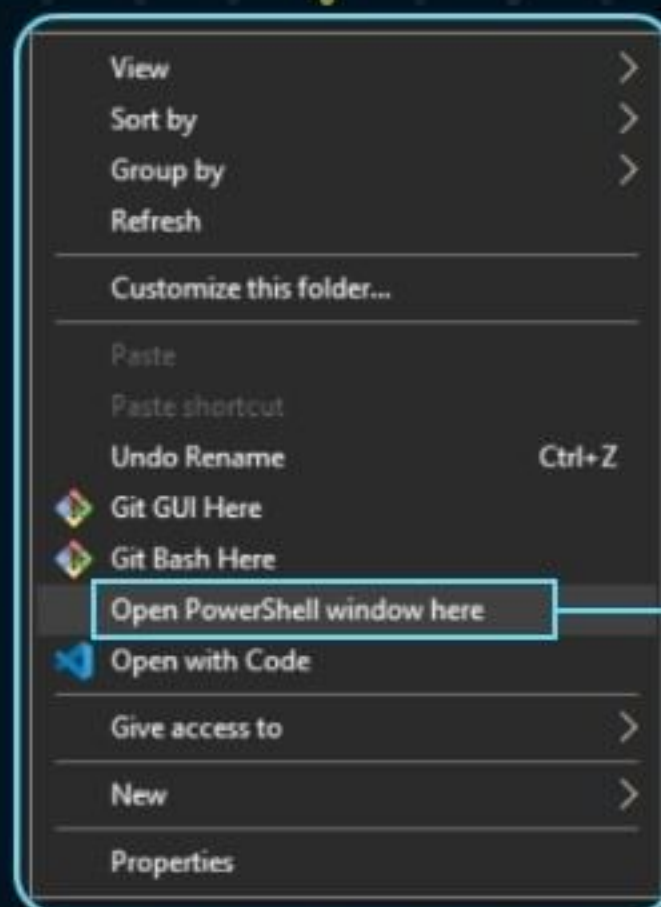

Introduction

Create React App is an officially supported way to create single-page React applications. It offers a modern build setup with no configuration.

Procedure

- ★ Create a Folder.
- ★ Press Shift and Right click.

Click here.

- ★ You'll see a blue terminal like window.

A screenshot of a terminal window. The window has a dark background and a title bar with standard Windows window controls (minimize, maximize, close). Inside the terminal, the command 'npx create-react-app my-app' is typed into the input line. A blue line points from the text 'Type this command.' to the command text.

```
npx create-react-app my-app
```

Type this command.

@gulraizcodes

Breakdown of command

This generates the required files & folders to start the React application & run it on the browser.

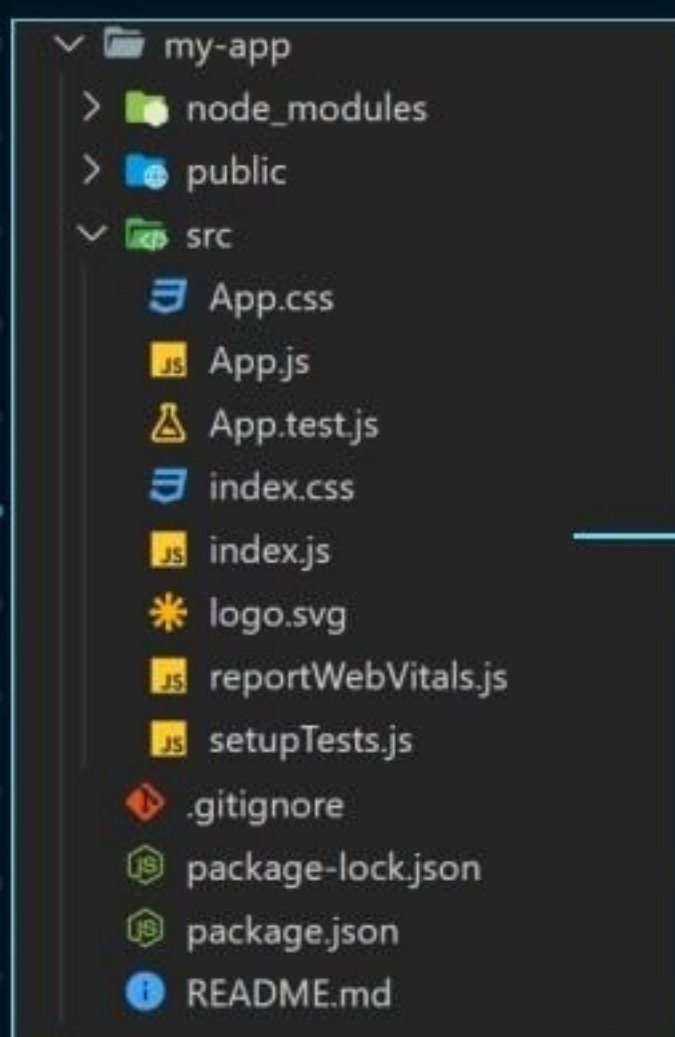

This is your folder name. It can be anything.

```
npx create-react-app my-app
```

npm — Manages packages and it is not always easy to run them easily.

npx — A tool to run node packages easily without installing binaries.

What's next?

This is how folder structure will look like. Let's understand it in the next post.
